WSU Beamer Theme

Joseph C. Slater

Wright State University

Summer 2007

Getting the WSU Beamer Package

Beamer is a wonderful LaTeX document class that produces high quality PDF slide presentations.

Moreover, you can customize and develop your own themes!

This theme was developed for Wright State University based on the UNLTheme.

The theme itself was developed from the PaloAlto, sidebar and sidbartab themes available by default in beamer.

However, this theme has several unique features and customizations:

- The color theme uses WSU's "green and gold" colors.
- Improved spacing.
- Math mode preserves LaTeX's serif font.
- Incorporates WSU's Logo automatically.
- Unique drop shadows on the top and side bars!

Other Features

For convenience, if you are in handout mode, all features, including the navigation symbols at the bottom right are shut off!

The nicer UNL theme has drop shadows. I can't get those to work here. That package doesn't work for me either. It turns all following text grey.

Definition

This is my definition

$$A = \{p \mid p \text{ is prime }\}$$

Theorem

The set A is countable.

To use the Wright State Theme simply use:

```
\usetheme{WrightState}
```

after your document class declaration. To pass options to the package, use

```
\usetheme[left,hideothersubsections,width=2.5cm]{Wrig}
```

There are also several options that you can pass:

- `hideothersubsections` – This hides subsections in the sidebar *other than* the subsections of the current section.

- `hideallsubsections` – This option doesn't print *any* subsections in the sidebar.

- `width` – sets the width of the sidebar, default is `2.5\baselineskip`

- `height` – sets the height of the header, default is `2.5\baselineskip`

- `left` – sets the sidebar to the left of the slide (default).

- `right` – sets the sidebar to the right of the slide.

The theme is available from my home page,
`http://www.cs.wright.edu/~jslater/classes/Thesis-Dissertation.html`

You need `beamerthemeWrightState.sty` and `WSU.pdf` (the WSU logo).

Place them in the working directory or add them to `beamer/themes/theme` or somewhere in your LATEX path and you're good to go!
